If your shop uses bar-fed CNC lathes, for a small investment you can run them extra hours every night without an operator.

The Royal Rota-Rack™ is a simple, off-the-shelf accumulator that safely collects and protects finished parts as they exit the machine.

With a capacity much larger than a lathe's standard collection box, Rota-Rack™ typically pays for itself within just a few months by providing **hours of highly profitable unmanned production for machines you already own, but aren't getting the most out of.**

The Royal Rota-Rack™ unlocks hours of extra unmanned production potential. Simply load your bar feeder before you leave for the night and be greeted the next morning by a Rota-Rack full of finished parts.
