TuffCut® XT9 380/380CB

The TuffCut® XT9 380/380CB 9 flute end mill series offers extreme performance on difficult to machine materials. Coated with our ALtima® Xtreme coating, it delivers exceptional performance for demanding applications. The 380/380CB is designed for high-speed machining of Titanium,

Inconel, Stainless Steel, and similar materials. Heat generated during machining could result in the reduction of strength/hardness of the workpiece material. With the added protection of the AX coating, its max service temperature is 2012°F/1100°C. An uneven 9 flute design contributes to the high performance tooling by reducing harmonics to provide stable machining zones for precision machining. There is an added cost savings due to the life of the tool.

The 380CB has an added chipbreaker to allow for a longer tool life by managing chip control and reducing cutting forces. The staggered chipbreaker technology helps reduce cutting forces and allows for excellent chip management.

Coming Soon! 380 series expansion.

ISA24

ISA24 is a premier industry event where Manufacturers, Distributors, IMRs and Service Providers come together to shape the future, cultivate relationships, and propel the industrial supply channel forward.

This three-day event lived up to its word. The ISA24 conference has proven to be a resounding success for M.A. Ford® and our dedicated team who were on hand to help, advise and support visitors to this key industry networking event.

Our Director of Sales, Jim Ellis, had this to say, "In terms of the number of visitors, quality of inquiries and the level of interest shown in our products, this was definitely our best ISA show to date, and I want to thank everyone who supported us by taking time to visit our booth and talk to our team."

ATTENTION!

Please Note: There is a new email address for account receivable. Please send all remittances and inquires to: mafar@maford.com
