M.A. Ford® TuffCut® XR-AL 334 Series Expansion

The TuffCut® XR-AL 334 Series End Mill, high performance, high volume aluminum rougher now includes a coated and uncoated option, as well as an expanded neck relief variant.

Our 334N series includes our neck relief variants with 3xD, 4xD, & 5xD reach capabilities to provide versatility in deep component features. This series is also available coated or uncoated.

Both the 334 and 334N series coated tools are coated with Gem+ (DLC).

Notice the Color Change?

With advances in TaC coating technology (also known as DLC), a new re-formulated Gem+ coating is being used on our Series 334/ 334N end mills for aluminum, giving them a distinctive multi-colored finish, while retaining their excellent roughing performance.

The new Gem+ coating reduces the friction coefficient from 0.3 to 0.1, while the 3 flute TuffCut® XR-AL 334 end mills also have variable helix geometry and staggered chip breakers, making them the perfect solution for roughing aluminum & non-ferrous metals, plus non-metallics.

The Series 334/334N, not only delivers improved chip control, extended tool life and an improved finish, when compared to traditional knuckle roughers, but can also be used for HEM and slotting applications, delivering high metal removal rates.
